Hohmann Posterior Inferior Retractor

SKU RM-HPIR-11-1

\$74 USD

AVAILABLE SIZES & PRICING

SIZE / OPTION	SKU / DETAILS	PRICE (USD)
Left Handle to Bend #7 — 11" (27.94 cm)	RM-HPIR-11-1-1	\$74
Medium Right Handle to Bend #7 — 11" (27.94 cm)	RM-HPIR-11-1-2	\$74

PRODUCT DESCRIPTION

The Hohmann Posterior Inferior Retractor is a specialized orthopedic surgical instrument engineered specifically to provide reliable bone leverage and soft-tissue displacement around the posterior and inferior borders of the acetabulum during total hip arthroplasty. Designed to wrap around the ischial and acetabular margins, this instrument allows surgical teams to elevate heavy capsular and muscular tissues away from the socket, preserving an unobstructed visual corridor for acetabular reaming.

Built for high-leverage joint clearance, this Hohmann Posterior Inferior Retractor model maintains a standard body length reach of 11 inches (27.94 cm, \$74). Its working end incorporates a curved blade layout equipped with uniquely shaped dual prongs and a sharp curved edge engineered to bite securely into cortical bone cortices without slipping. Surgeons can customize the instrument across targeted handle curvature orientation profiles: a Left handle to bend #7 or a Medium right handle to bend #7, ensuring optimal alignment with specific patient approaches.

Forged from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) with a reflection-free satin matte finish, Retractor Maker manufactures the Hohmann Posterior Inferior Retractor to withstand immense mechanical torque and repeated hospital autoclave cycles, providing joint replacement and trauma teams worldwide with unyielding clinical durability and precision.

THANK YOU

We look forward to discussing your surgical retractor requirements.
