SIZE / OPTION	SKU / DETAILS	PRICE (USD)
Glenoid Condyle Retractor	7" (17.8 cm) overall length, contoured hooking blade — 1	\$44
Protective Sleeve / Box	Individual transit packaging — 1	\$44

PRODUCT DESCRIPTION

The Glenoid Condyle Retractor is a specialized handheld orthopedic instrument engineered specifically to provide reliable bone leverage and soft-tissue displacement during reconstructive procedures of the shoulder and condylar joint spaces. Designed with an anatomical hooking beak, this instrument allows surgeons to wrap around bony articular margins cleanly, levering joint capsules away from the target bone without crushing periosteal layers.

Built for agile joint space extraction, this Glenoid Condyle Retractor configuration features a standardized 7-inch (17.8 cm) overall length (\$44) that provides optimal mechanical advantage while maintaining high manual dexterity. The working end incorporates smooth, polished margins contoured to seat securely over the glenoid rim or femoral condyles, preventing accidental slippage during joint preparation. Its ergonomic flat handle provides surgical assistants with steady, fatigue-free manual leverage throughout multi-hour procedures.

Forged from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) with a reflection-free satin matte finish, Retractor Maker produces the Glenoid Condyle Retractor to withstand heavy orthopedic torque and repeated hospital autoclave cycles, providing sports medicine and joint reconstruction teams worldwide with unyielding clinical durability and performance.

THANK YOU

We look forward to discussing your surgical retractor requirements.
