Double-Ended Layout — 6" length, 5 mm & 13 mm dual ends	RM-STKR-6IN-1-3	\$59

PRODUCT DESCRIPTION

The S Total Knee Retractor is a specialized orthopedic surgical retractor engineered specifically to provide reliable soft-tissue and collateral ligament displacement during total and unicompartmental knee arthroplasty. Designed with an anatomical S-shaped chassis, this instrument allows surgeons to retract periarticular capsules and ligamentous bands cleanly away from oscillating bone saws, exposing the tibial plateau and femoral condyles without obstructing the surgical corridor.

Built for lasting mechanical performance in demanding orthopedic environments, this S Total Knee Retractor configuration features an overall tool length of 6 inches (15.24 cm, \$59). Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic), the sleek S-shaped layout offers multiple blade and tip footprints to match specific joint spaces, including single wide-blade models measuring 10 mm and 20 mm, alongside a versatile double-ended layout measuring 5 mm and 13 mm. Its rounded blade margins protect delicate neurovascular bundles and collateral ligaments from laceration.

Forged with an anti-glare satin matte finish, Retractor Maker produces the S Total Knee Retractor to withstand heavy orthopedic torque and repeated hospital autoclave cycles, delivering high corrosion resistance, unyielding structural rigidity, and complete autoclave durability for knee reconstruction suites and trauma

centers worldwide.

THANK YOU

We look forward to discussing your surgical retractor requirements.
