Minimally Invasive Knee Retractors

SKU RM-MIKR-1

\$79 USD

AVAILABLE SIZES & PRICING

SIZE / OPTION	SKU / DETAILS	PRICE (USD)
19 cm Overall Length	RM-MIKR-1-1	\$79
20 cm Overall Length	RM-MIKR-1-2	\$84
22 cm Overall Length	RM-MIKR-1-3	\$89

PRODUCT DESCRIPTION

Minimally Invasive Knee Retractors are indispensable orthopedic surgical instruments engineered specifically to provide reliable bone leverage and periarticular soft-tissue displacement through reduced skin incisions during minimally invasive total knee arthroplasty (MIS-TKA). Designed with low-profile contoured shanks, these retractors allow surgical teams to retract the patella, collateral ligaments, and capsule cleanly without exerting excessive tension on incision margins.

Built to accommodate variable patient anatomies and tissue depths, this Minimally Invasive Knee Retractors series is available in three distinct longitudinal reaches selectable via the options menu: 19 cm (\$79) for slender knee joints, 20 cm (\$84) for standard adult procedures, and an extended 22 cm (\$89) reach for deep joint corridors. Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic), each retractor features an ergonomic handle and a contoured beak tip that seats securely against femoral and tibial bone cortices, preventing slippage during high-speed bone cuts.

Forged with an anti-glare satin matte finish, Retractor Maker produces Minimally Invasive Knee Retractors to withstand heavy mechanical torque and repeated hospital autoclave cycles, delivering exceptional clinical durability, corrosion resistance, and complete autoclave dependability for joint reconstruction suites worldwide.

THANK YOU

We look forward to discussing your surgical retractor requirements.
