Dual Suction & Fiber-Optic Layout — Retractor with 3-hole tip, suction line, and fiber-optic bundle	RM-GTSR-1-3	\$209

PRODUCT DESCRIPTION

The Gerbault Tebbett's Suction Retractor is a premier rhinoplasty and facial reconstructive surgical instrument engineered specifically to provide superior dorsal flap elevation, continuous smoke/fluid evacuation, and shadowless intraoperative visualization. Designed in accordance with modern preservation and structural rhinoplasty techniques, this instrument clears blood and irrigation fluid instantaneously without requiring a secondary suction cannula.

Built for uncompromised operative sightlines in confined nasal vaults, this Gerbault Tebbett's Suction Retractor model features a proprietary three-hole tip design that aspirates fluid efficiently while preventing soft-tissue draw-in or mucosal occlusion. Surgeons can configure the instrument across two functional options: a standard Suction-Only layout featuring a universal suction tubing connector, or a Dual Suction & Fiber-Optic Layout (\$209) that combines the integrated suction channel with high-transmission fiber-optic channel paths for simultaneous cavity illumination and fluid clearing.

Crafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) and high-transmission optical glass fibers with an anti-glare satin matte finish, Retractor Maker supplies the Gerbault Tebbett's Suction Retractor non-sterile and fully autoclavable inside protective packaging, providing plastic, ENT, and reconstructive

surgery centers with unyielding clinical precision and optical durability.

THANK YOU

We look forward to discussing your surgical retractor requirements.
