| 22.5 cm       | RM-BMCR-1-2   | \$49        |

## PRODUCT DESCRIPTION

The Bremerich Mandibular Channel Retractor is an indispensable maxillofacial surgical retractor engineered specifically to provide safe, stable exposure of the inferior and posterior borders of the mandibular ramus. Designed with a curved distal channel lip, this instrument hooks securely along the cortical bone margin, shielding facial vessels and soft tissues from rotary instruments and oscillating saws.

Built for precision intraoral clearance, this Bremerich Mandibular Channel Retractor configuration features a slim 10 mm blade profile engineered to dramatically improve surgical access within highly confined workspaces. Surgeons can select between two working lengths: 18 cm (\$44) for standard oral surgery and 22.5 cm (\$49) for extended deep ramus approaches. Its ergonomic handle gives surgical assistants firm, non-slip manual control, reducing hand fatigue during lengthy osteotomy procedures.

Machined from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) with a reflection-free satin matte finish, Retractor Maker produces the Bremerich Mandibular Channel Retractor to withstand repetitive hospital sterilization cycles, providing oral, maxillofacial, and plastic surgeons with high corrosion resistance and dependable durability.

# THANK YOU

We look forward to discussing your surgical retractor requirements.
