SIZE / OPTION	SKU / DETAILS	PRICE (USD)
Dingo Modified Humeral Head Retractor	10" (25.5 cm) length, curved serrated tip	\$134
Protective Sleeve / Box	Individual transit packaging	\$134

PRODUCT DESCRIPTION

The Dingo Modified Humeral Head Retractors are specialized orthopedic shoulder instruments engineered specifically to provide secure, slip-resistant displacement of the proximal humerus during total shoulder arthroplasty and fracture repair. Designed with an anatomical curvature that conforms around the humeral neck, these retractors allow surgical assistants to apply steady leverage without slipping off wet or osteoporotic bone margins.

Built for demanding joint reconstructions, this Dingo Modified Humeral Head Retractors model features an overall reach of 10 inches (25.5 cm, \$134). Its working end is formatted with specialized curved, serrated tips explicitly designed to bite securely into cortical bone, preventing accidental displacement during glenoid preparation. The heavy-duty handle provides mechanical advantage and tactile control, reducing user fatigue during lengthy shoulder reconstruction procedures.

Forged from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) with a reflection-free satin matte finish, Retractor Maker manufactures Dingo Modified Humeral Head Retractors to endure heavy orthopaedic torque and repeated hospital autoclave cycles, providing shoulder reconstruction and sports medicine teams worldwide with dependable durability and clinical precision.

THANK YOU

We look forward to discussing your surgical retractor requirements.
