PRODUCT DESCRIPTION

The Ross Aortic Valve Retractor is an internationally acclaimed cardiovascular surgical instrument engineered specifically to provide safe, non-traumatic retraction of aortic valve leaflets and the aortic root during valve replacement and reconstructive procedures. Designed with an anatomically curved blade face, this retractor allows cardiothoracic surgeons to inspect the aortic annulus, coronary ostia, and subvalvular structures cleanly without causing contusions to fragile valvular cusps.

Built to clinical framework standards, this Ross Aortic Valve Retractor configuration features an overall tool length of 25 cm (\$89) that provides deep reaching clearance into the aortic root while keeping assistant hands outside the primary field. Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic), the handle assembly incorporates a solid ergonomic hexagonal grip handle framework that provides exceptional

rotational stability and non-slip control. Surgeons can choose across six distinct anatomical blade sizes: Size #1 ($\frac{5}{8}$ " $\times$ $\frac{5}{8}$ "), Size #2 ($\frac{1}{2}$ " $\times$ $\frac{7}{8}$ "), Size #3 ($\frac{3}{4}$ " $\times$ 1"), Size #4 ($\frac{3}{4}$ " $\times$ 1 $\frac{1}{8}$ "), Size #5 (1 $\frac{1}{8}$ " $\times$ 1 $\frac{1}{8}$ "), and Size #6 (1 $\frac{3}{8}$ " $\times$ $\frac{7}{8}$ ").

Forged with an anti-glare satin matte finish, Retractor Maker manufactures the Ross Aortic Valve Retractor to withstand repetitive hospital autoclave cycles, providing cardiac surgical centers and thoracic operating suites worldwide with unyielding structural rigidity, high corrosion resistance, and complete clinical durability.
