Harrington Splanchnic Retractor With Fiber Optic

SKU RM-HSR-FO-1

\$189 USD

COMPONENT LIST

QUANTITY	COMPONENT	DIMENSIONS / DESCRIPTION
1	Harrington Splanchnic Retractor With Fiber Optic	127 × 62 mm blade, light bundle, suction-irrigation channel — 1
1	Universal Light Cable Fitting	Connects to standard OR fiber-optic cables — 1
1	Protective Sleeve / Box	Standard transit packaging — 1

PRODUCT DESCRIPTION

The Harrington Splanchnic Retractor With Fiber Optic is a premier illuminated surgical instrument engineered specifically to combine broad, atraumatic visceral displacement with direct optical lighting and active fluid management in deep operative spaces. By integrating a high-transmission fiber-optic channel and a continuous suction-irrigation channel along its sweetheart blade, this retractor eliminates dark recesses and evacuates pooling fluids simultaneously.

Designed to maximize cavity visibility during extensive abdominal and pelvic dissections, this Harrington Splanchnic Retractor With Fiber Optic configuration features a standardized blade dimension measuring 127 mm long by 62 mm wide (\$189). Its smooth, heart-shaped distal paddle protects fragile liver, splenic, and bowel tissues from localized compression. The built-in suction-irrigation tube system clears blood and electrosurgical plume instantly, while the universal light connector fits standard hospital light cables (Storz, Olympus, Wolf, ACMI).

Crafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) and high-transmission optical glass fibers with an anti-glare satin matte finish, Retractor Maker produces the Harrington Splanchnic Retractor With Fiber Optic to strict clinical standards, delivering high durability, optical transmission, and complete autoclave durability for general, urological, and gynecological surgical centers worldwide.

THANK YOU

We look forward to discussing your surgical retractor requirements.
