Protective Sleeve / Box	Dimensions / Details: Individual transit packaging · Quantity Included: 1	\$119

PRODUCT DESCRIPTION

The Marx Breast Retractor is an internationally acclaimed aesthetic and oncologic breast surgery retractor engineered specifically to provide broad, atraumatic tissue elevation and pocket visualization during mammoplasty and mastectomy procedures. Designed with an elongated curved blade profile, this instrument allows surgeons to elevate the pectoralis major muscle and breast parenchyma cleanly, establishing an expansive working pocket for silicone prosthesis insertion or tissue expander placement.

Built to maximize leverage while reducing user hand fatigue, this Marx Breast Retractor configuration features an overall tool length of 27 cm (\$119). Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) to provide lasting strength and corrosion resistance, its working end incorporates a 30 mm wide by 125 mm long blade specifically contoured to support soft-tissue curves atraumatically. The ergonomic handle design ensures operating assistants maintain sustained counter-traction without wrist strain during prolonged reconstructive procedures.

Forged with an anti-glare satin matte finish, Retractor Maker produces the Marx Breast Retractor to withstand repetitive hospital autoclave cycles, delivering high corrosion resistance, unyielding structural rigidity, and complete autoclave durability for cosmetic, plastic, and reconstructive surgery centers worldwide.

THANK YOU

We look forward to discussing your surgical retractor requirements.
