9" (22.86 cm) — 30 mm or 35 mm	RM-FSR-SHLD-1-3	\$99

PRODUCT DESCRIPTION

Fukuda Style Retractors are essential orthopedic surgical instruments engineered specifically to provide dependable, controlled displacement of the proximal humerus away from the glenoid cavity during shoulder reconstruction. Designed with an anatomically curved ring-fenestrated blade, these retractors cradle the humeral head securely, allowing surgeons to prepare the glenoid surface without risk of instrument slippage or cartilage shearing.

Built for complete procedural adaptability, the Fukuda Style Retractors series is manufactured across three selectable overall lengths: a compact 6 ½-inch model (\$89), an intermediate 8 ¾-inch model (\$94), and an extended 9-inch model (\$99). The line is offered in two standardized blade width profiles—30 mm and 35 mm—allowing surgical teams to match patient-specific humeral dimensions. Its ergonomic flat handle provides surgical assistants with steady counter-traction and non-slip control.

Machined from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) with a reflection-free satin matte finish, Retractor Maker produces Fukuda Style Retractors to withstand heavy mechanical loads and repeated hospital autoclaving cycles, providing shoulder reconstruction and sports medicine teams worldwide with exceptional durability, corrosion resistance, and clinical performance.

THANK YOU

We look forward to discussing your surgical retractor requirements.
