Left Side Model — 22.5 cm length, left-curved condylar neck blade	RM-SCNR-225-1-2	\$49

PRODUCT DESCRIPTION

The Salzburg Condylar Neck Retractor is a specialized oral, maxillofacial, and temporomandibular joint (TMJ) surgical retractor engineered specifically to provide safe bone leverage and soft-tissue displacement around the mandibular condyle and subcondylar neck. Designed with an anatomical hooking blade that cradles the deep condylar neck, this instrument allows surgeons to manipulate bony fragments cleanly while shielding the internal maxillary artery and facial nerve branches.

Built to withstand frequent autoclave sterilization cycles while offering a lifetime warranty against rust, this Salzburg Condylar Neck Retractor configuration features an overall tool length of 22.5 cm (\$49). Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic), the instrument offers available anatomical directions in Right or Left side model configurations selectable via the purchasing menu options. The single-ended blade architecture is precisely contoured for the condylar neck region, preventing bone slippage while the ergonomic handle provides operating assistants with steady manual leverage.

Forged with an anti-glare satin matte finish, Retractor Maker manufactures the Salzburg Condylar Neck Retractor to withstand repetitive hospital sterilization cycles, providing oral, maxillofacial, and craniofacial surgery centers worldwide with exceptional mechanical stability, corrosion resistance, and complete autoclave durability.

THANK YOU

We look forward to discussing your surgical retractor requirements.
