Protective Sleeve / Box	Individual transit packaging — 1	\$94

PRODUCT DESCRIPTION

The Fukuda Kujat Style Retractor is a specialized orthopedic shoulder instrument engineered specifically to provide powerful, slip-resistant leverage of the proximal humerus during total and reverse shoulder arthroplasty. Designed to cup the posterior humeral head, this retractor displaces the humerus posteriorly away from the glenoid rim, granting the surgical team an expansive, unobstructed view of the articular socket.

Built for maximum manual leverage and intraoperative control, this Fukuda Kujat Style Retractor configuration features an overall tool length of 9 inches (22.86 cm, \$94). Its working end incorporates a wide serrated pattern profile that grips cortical bone and surrounding capsular tissue firmly, preventing accidental slippage during reaming and component insertion. The instrument is formatted with a heavy-duty T-Bar grip handle that gives the surgical assistant substantial mechanical pulling advantage while reducing wrist and forearm strain.

Forged from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) with a reflection-free satin matte finish, Retractor Maker manufactures the Fukuda Kujat Style Retractor to withstand immense orthopaedic torque and repeated hospital autoclave cycles, providing shoulder reconstruction and trauma teams worldwide with unyielding clinical dependability and precision.

THANK YOU

We look forward to discussing your surgical retractor requirements.
