Engh Intercondylar Notch Retractor	8 1/8" (206.4 mm) length, 2.25" tip	\$79
Protective Sleeve / Box	Individual transit packaging	\$79

PRODUCT DESCRIPTION

The Engh Intercondylar Notch Retractor is a specialized orthopedic knee surgical retractor engineered specifically to provide unobstructed exposure of the intercondylar notch and distal femur during total knee arthroplasty. Designed to seat firmly into the femoral notch, this instrument allows surgeons to prepare bone surfaces, perform notch resections, and protect the posterior cruciate ligament (PCL) from oscillating saw blades.

Built for adult knee joint extraction and precision bone preparation, this Engh Intercondylar Notch Retractor model features an overall tool length of 8 1/8 inches (206.4 mm, \$79). Its working end incorporates a dedicated 2.25-inch (57.1 mm) contoured beak that hooks securely within the notch, providing steady mechanical counter-traction on surrounding soft tissues. Its robust ergonomic handle ensures non-slip control and maximum leverage during joint manipulation.

Forged from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) with a reflection-free satin matte finish, Retractor Maker manufactures the Engh Intercondylar Notch Retractor to withstand heavy orthopedic torque and repeated hospital autoclave cycles, providing knee reconstruction and joint replacement teams with unyielding clinical durability.

THANK YOU

We look forward to discussing your surgical retractor requirements.
