3×3 Blunt Prongs	RM-VLPR-SERIES-1-B	\$219
Solid Blades (Smooth Face)	RM-VLPR-SERIES-1-C	\$199

PRODUCT DESCRIPTION

The Vickers Low Profile Retractor is a specialized micro-surgical and hand retractor engineered specifically to provide dependable, hands-free soft-tissue displacement in confined operative corridors. Designed with an ultra-compact spring bar mechanism, this instrument rests flat against the hand or wrist, allowing surgeons to spread delicate skin and subcutaneous margins cleanly without obstructing delicate micro-instruments or optical line of sight.

Built to navigate narrow micro-incisions with ease, this Vickers Low Profile Retractor series is offered in two overall instrument length variations: 7.5 cm (3 inches) and 9.0 cm (3 ½ inches). Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic), the instrument supports three attached low-profile modular working end blade configurations selectable via the purchasing parameters: a 2 × 2 Blunt Prongs pattern (\$199) for focused digital incisions, an expanded 3 × 3 Blunt Prongs pattern (\$219) for wider fascial retraction, and a Solid Blades smooth face pattern (\$199) for atraumatic soft tissue holding. Its side-loading retraction plates seat securely beneath wound margins without causing local tissue tearing.

Forged with an anti-glare satin matte finish, Retractor Maker produces the Vickers Low Profile Retractor to withstand repetitive hospital autoclave cycles, providing hand surgery centers, plastic surgery suites, and outpatient orthopedic clinics worldwide with exceptional mechanical stability, corrosion resistance, and complete autoclave durability.

THANK YOU

We look forward to discussing your surgical retractor requirements.
