| Protective Sleeve / Box             | Individual transit packaging                     | \$59        |

### PRODUCT DESCRIPTION

The Bose Tracheal Retractor Spring Type is a specialized self-expanding surgical retractor engineered to provide hands-free tracheal wall stabilization and incision clearance during delicate airway interventions. Operating via an elastic spring-tension mechanism, this instrument gently spreads wound edges apart under continuous, controlled counter-traction, freeing the surgical team during critical airway cannulation.

Built for agility in restricted anatomical spaces, this Bose Tracheal Retractor Spring Type model features a compact 7 cm profile (\$59) that provides high micro-flexibility without crowding the operative site. Its working ends are engineered with specialized, well-defined curved blades that exert gentle yet rigid support against the tracheal cartilage and mucosal margins, preventing localized tissue collapse or trauma.

Precision-machined from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) with a reflection-free satin matte finish, Retractor Maker produces the Bose Tracheal Retractor Spring Type to withstand repetitive hospital sterilization cycles, giving emergency, ENT, and pediatric surgical teams dependable durability and instant deployment capability.

# THANK YOU

We look forward to discussing your surgical retractor requirements.
