SIZE / OPTION	SKU / DETAILS	PRICE (USD)
Sisson Skin Retractor	10.5 cm overall length, 1×1 sharp prong hook, flat handle	\$84
Protective Sleeve / Box	Individual transit packaging	\$84

PRODUCT DESCRIPTION

The Sisson Skin Retractor is a specialized handheld micro-surgical retractor engineered specifically to provide secure, non-slip skin flap elevation and fine wound margin exposure during delicate plastic, reconstructive, and facial procedures. Designed with an ultra-fine hook profile, this instrument allows surgeons to grasp cutaneous and subcutaneous margins cleanly without crushing delicate dermal microcirculation or causing margin necrosis.

Built to deliver maximum durability and corrosion resistance backed by a lifetime warranty against rust, this Sisson Skin Retractor configuration features an overall tool length of 10.5 cm (\$84), optimized for highly detailed, close-quarters tissue manipulation. Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic), the prong layout configuration incorporates an asymmetrical 1×1 sharp prong array. The sharp prongs are meticulously honed to deliver a secure, slippage-free grasp on skin edges, ensuring reliable tissue engagement with minimal risk of displacement during high-magnification suturing. The flat handle ensures fatigue-free manual leverage.

Forged with an anti-glare satin matte finish, Retractor Maker manufactures the Sisson Skin Retractor to withstand repetitive hospital autoclave cycles, providing plastic surgery suites, ophthalmic operating theaters, and ENT clinics worldwide with unyielding structural rigidity, high corrosion resistance, and complete clinical durability.

THANK YOU

We look forward to discussing your surgical retractor requirements.
