Orringer Cheek Retractor	4" (10.16 cm) length, 3" (8 cm) width, self-retaining spring wire	\$49
Protective Sleeve / Box	Individual transit packaging	\$49

PRODUCT DESCRIPTION

The Orringer Cheek Retractor is an essential oral, dental, and maxillofacial surgical retractor engineered specifically to provide hands-free bilateral retraction of the cheeks and lips during intraoral procedures. Designed with an anatomical spring-action wire frame, this instrument holds the oral vestibule wide open automatically, eliminating assistant hand placement while providing the surgical team with an expansive, static visual field across both dental arches.

Built in a standard size configuration balanced for patient comfort and maximum procedural workability, this Orringer Cheek Retractor model features an overall instrument length of 4 inches (10.16 cm) paired with an expansive 3-inch (8 cm) working blade width (\$49). Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic), the simple, strong, hands-free self-retaining layout utilizes smooth, contoured wire loops that cradle the labial commissures safely without pinching mucosa or causing tissue tears.

Forged with an anti-glare satin matte finish, Retractor Maker produces the Orringer Cheek Retractor to withstand repetitive hospital autoclave cycles, delivering high corrosion resistance, resilient spring tension, and complete autoclave durability for oral surgery suites, dental implantology centers, and cleft palate clinics worldwide.

THANK YOU

We look forward to discussing your surgical retractor requirements.
