Asymmetric 3 Prongs Left Pattern — 13 cm, 3 semi-sharp prongs left with smooth blade right	RM-PSRR-109-1-3	\$109

PRODUCT DESCRIPTION

The Plester Self Retaining Retractor is an internationally acclaimed otologic and microsurgical retractor engineered specifically to provide stable, hands-free soft-tissue and periosteal retraction in confined surgical fields. Designed with an offset low-profile finger-ring chassis, this instrument holds postauricular and temporal incisions open under mechanical tension, eliminating assistant hand fatigue while preserving an open visual corridor under operating microscopes.

Built for diverse otologic and neurosurgical procedures, the Plester Self Retaining Retractor series (\$109) features an integrated mechanical ratchet lock system that ensures steady positioning and reduces manual strain. Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic), the product family includes three primary configurations: the Detachable Standard Pattern (4" or 5" / approx. 11 cm) with semi-sharp fine prongs and Left or Right solid blades, the Extra Fine 2:2 Prongs Pattern (11 cm or 13 cm) featuring an asymmetrical 2x2 prong array optimized for deep corridors, and the Asymmetric 3 Prongs Left Pattern (13 cm) combining 3 semi-sharp prongs on the left with a smooth blade on the right for balanced,

controlled wound exposure.

Forged with an anti-glare satin matte finish, Retractor Maker manufactures the Plester Self Retaining Retractor to withstand repetitive hospital autoclave cycles, providing ENT suites, neurosurgical operating theaters, and outpatient surgical centers worldwide with exceptional mechanical stability, corrosion resistance, and complete clinical durability.

THANK YOU

We look forward to discussing your surgical retractor requirements.
