110 mm depth (10 or 20 mm) — Left-sided or Right-sided	RM-WSDR-153-1-3	\$149

PRODUCT DESCRIPTION

The Williams Spinal Discectomy Retractor is an internationally acclaimed spinal microsurgery retractor engineered specifically to provide safe, non-traumatic paraspinal muscle displacement and laminar exposure during lumbar microdiscectomy procedures. Designed with an anatomical bayonet-offset shank and a deep-reaching blade, this instrument allows spine surgeons to establish a clean unilateral operative window while keeping assistant hands and handles outside the microscopic line of sight.

Built to withstand frequent autoclave sterilization cycles while remaining highly resistant to corrosion, this Williams Spinal Discectomy Retractor configuration features an overall tool length of 15.3 cm (\$149). Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic), the instrument offers an extensive selection matrix: available blade depths span across six distinct options (50 mm, 60 mm, 70 mm, 80 mm, 90 mm, and 110 mm depth) combined with selectable 10 mm wide or 20 mm wide blade layouts. Surgeons can also configure Left-sided and Right-sided blade orientations to match targeted clinical approaches. Its ergonomic handle delivers fatigue-free manual leverage.

Forged with an anti-glare satin matte finish, Retractor Maker manufactures the Williams Spinal Discectomy Retractor to withstand heavy counter-traction, providing spine centers, neurosurgical suites, and orthopedic

trauma operating rooms worldwide with exceptional durability, corrosion resistance, and complete autoclave durability.

THANK YOU

We look forward to discussing your surgical retractor requirements.
