Protective Sleeve / Box	Individual transit packaging	\$69

PRODUCT DESCRIPTION

The Rigby Self-Retaining Vaginal Retractor is an essential gynecological and pelvic reconstructive surgical retractor engineered specifically to provide stable, hands-free vaginal canal expansion during minor and major pelvic procedures. Designed with self-retaining scissor-action arms, this instrument holds opposing vaginal walls apart under mechanical tension, eliminating assistant hand fatigue while preserving an expansive, static visual corridor to the cervix.

Built with a highly polished finish to ensure a smooth, hygienic surface profile, this Rigby Self-Retaining Vaginal Retractor configuration features an overall tool length of 18 cm (\$69). Handcrafted from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic), the blade geometry layout incorporates 63.5 mm deep flat, smooth working blades contoured with rounded atraumatic margins to prevent mucosal pinching or laceration. Its handle assembly incorporates a ring handle grip integrated with a mechanical multi-position locking ratchet catch gear that locks firmly at variable opening widths without accidental release.

Forged with an anti-glare satin matte finish on handling interfaces, Retractor Maker produces the Rigby Self-Retaining Vaginal Retractor to withstand repetitive hospital autoclave cycles, delivering high corrosion resistance, unyielding structural rigidity, and complete clinical durability for gynecological surgical suites and outpatient clinics worldwide.

THANK YOU

We look forward to discussing your surgical retractor requirements.
