7.8 cm — Flat Blade or Sharp Tip	RM-FSR-1-5	\$42
14 cm — Flat Blade or Sharp Tip	RM-FSR-1-6	\$44

PRODUCT DESCRIPTION

The Farr Spring Retractor is an agile, self-expanding surgical retractor engineered specifically to provide hands-free wound margin separation during fine ophthalmic, plastic, and pediatric surgical procedures. Utilizing an elastic spring-wire loop chassis, this instrument applies continuous, gentle counter-traction that spreads tissues apart without requiring bulky mechanical ratchets or assistant hand placement.

Built for delicate incision sizes, the Farr Spring Retractor offers extensive customizable options across six length increments: 4 cm (\$34), 5 cm (\$36), 5.5 cm (\$38), 6 cm (\$40), 7.8 cm (\$42), and an extended 14 cm (\$44) profile. Surgeons can select between two specialized tip geometries: Flat Blades designed to hold delicate skin flaps and mucosa atraumatically without puncture, or Sharp Pointed Tips engineered for firm, non-slip engagement in fibrous subcutaneous tissues.

Forged from Premium Grade AISI 304/316 Stainless Steel (Non-Magnetic) with high elastic memory and a reflection-free satin matte finish, Retractor Maker produces the Farr Spring Retractor to withstand repetitive

hospital sterilization cycles, providing surgical centers worldwide with exceptional spring resilience, corrosion resistance, and complete autoclave durability.

THANK YOU

We look forward to discussing your surgical retractor requirements.
